- Real estate developers
- Malls
- Hotels

This day need of security has no exemptions, and almost all sectors can be its application.

Technologies

Video Camera surveillance

CCTV surveillance not only used to capture crime related scenes but also help to monitor activities and process in business and factories. CCTV has become increasingly popular due to its vast application.

Analogue CCTV-

Although IP CCTV has many advantages over analogue, still it is effective for many surveillance applications and those who have a budget constraint. Video signal is captured and processed in analogue format. This analogue signal is transmitted via cable to a monitoring system for local viewing. We can also upgrade your existing analogue CCTV with IP CCTV or use a hybrid approach.

IP CCTV-

Based on internet protocol IP CCTV is the most efficient, flexible, scalable and cost-effective for almost every application. As it is IP based technology, a user can monitor the system from any location via the internet. IP CCTV surveillance can be deployed in any environment and have many advantageous over analogue CCTV system.

Fire Alarm System

A Fire Alarm System is used to detect the fire or effects of fire in the surrounding area. When the fire incident took place system will

Notify the occupant, notifies the person in the surrounding area, summons the fire service, and control all the fire alarm components in the building.

Video Door Phones

Video Door phones allow the homeowner and family to see and talk with the person at the door before letting him in. children, elders and person living alone can be most benefited with such a system

Intrusion Alarm

Also called as burglar Alarm used to prevent any specific danger or robbery. Intrusion Alarms are highly reliable, efficient and have a quick response to any motion within the area covered. Sensors are strategically placed and are highly sensitive to detect any movements and notifies the owner, alert surrounding by the loud siren.

Access Control System

Fingerprint or RF card based Access control System used for attendance record management, restricted access to a particular area. This system helps to efficiently manage employee records of the office lowering the burden of paperwork and errors. This also prevents false attendance thus reducing unethical behaviours of the employees.

EPABX Intercom System

EPABX is private telephone exchange used in resident apartment or organizations. Each telephone has a unique code. By typing this code, one can communicate his message quickly to another person. This saves time and productivity of the organization.
